DETAILED ACTION

This office action is in response to Paper No: 3, received 9/28/01, in which applicant cancelled claims 1-9 and added new claims 10-11.

Claims 10-11 are pending.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 10 and 11 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1-3 of U.S. Patent No. 6,310,041. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 10 of the instant application recites a pharmaceutical composition for ophthalmologic uses, comprising a complementary peptide having a sequence complementary to proline-glycine-proline (PGP). Claim 1 of

Art Unit: 1654

the '041 patent recites this same pharmaceutical composition. Claim 10 of the instant applicant further recites a group of complementary peptides. Claim 2 of the '041 patent recites complementary sequences based on the coding triplet for proline and glycine. Claim 11 of the instant application recites a method of inhibiting polymorphonuclear leukocyte polarization chemotaxis, and infiltration into tissue activated by a neutrophil chemoattractant in an individual, comprising the step of administering to said individual a pharmaceutical composition for ophthalmologic uses, so as to inhibit polymorphonuclear leukocyte infiltration into tissue. Claim 3 of the '041 patent recites this same method.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Chang et.al. (USPN 5,916,872).

The instant invention is drawn to a pharmaceutical composition, where a complementary peptide consists of Arg-Thr-Arg (RTR-SEQ ID NO:1).

Chang teaches cyclic peptides having broad spectrum antimicrobial activity (see abstract). Chang discloses SEQ ID NO:61 (column 71) that has a 100% query match with SEQ ID NO:1 of the instant application (see GenCore version 5.1.6, page 1, result #2).
